Cloud Apps Vision

"Empowering companies to achieve competitive advantage by running their businesses effectively and making decisions with confidence."

Companies often have to decide whether to work with manual processes or use complex solutions for their business processes. But this dilemma is unacceptable because process inefficiency and complexity are obstacles to achieving sustainable growth and competitive advantage.

At Boyum IT, we envision a world where SMEs are empowered to run their businesses efficiently and make confident decisions. We bring this world through user-friendly, role-based solutions that address key business challenges by automating processes and providing data-driven insights.
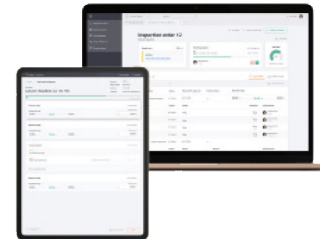

Applications

Intelligent solutions for specific business roles allow your team to only use what they really need – and get more out of their work than ever before.

Build
Product creation

Product design and management

Supporting product development and production departments in launching new or evolving products, to get from idea to production quickly.

Produce
Production processing

Shop floor management

A collaborative workflow between production management and the shop floor, for enabling production planning and understanding work done.

Inspect
Quality inspection

Quality control application

Create consistent quality testing plans to measure the success of your production, the quality of your suppliers, and discover ways to improve.

Role-based cloud applications that fit to your needs

By understanding each role's problems and needs, and adapting the interface to suit them, users can work in a way that fits their needs. Our role-based Cloud Apps transform your ERP system into a modern application, providing a more fluid and enjoyable user experience. You will run your business more efficiently than ever before.

PRODUCT MANAGER

- Determine material and labor costs based on the product structure, calculate manufacturing and sales costs.

SHOP FLOOR MANAGER

- Organize and prioritize production orders and track work in progress in real-time.

SHOP FLOOR OPERATOR

- Start and stop operations and collect time and material requirements in an efficient way.

INSPECTION MANAGER

- Define inspection plans, track and release inspection orders and analyze inspection results.

QUALITY INSPECTOR

- Check the quality of materials through the various processing steps in a fast and accurate way.

Get up and running quickly with lean cloud applications

Developed with state-of-the-art technology, Cloud Apps from Boyum IT have a modern look and feel with an intuitive user interface. With an easy-to-use and stylish layout, Cloud Apps ensure the best user experience possible, improving your team's productivity.

Boyum IT Cloud Apps are aimed at small and mid-sized companies.

They cover customer needs from:

- Discrete or process manufacturing companies looking for a solution to maximize their shop floor performance

- Quality departments, performing supply chain-related quality inspections

- Product development and production departments looking for a solution to manage product requests for new and evolving products.

The vision of Cloud Apps covers all areas of supply chain management for SMEs. They enable more structured work, shifting the users' focus onto the goals.

"We wanted to improve and optimize workflows and increase usability for our employees, as well as establish and ensure a secure data connection, and I believe we found and achieved that with Boyum IT."

"We saved 30% of administration time per week."

"Build and Produce has made us more efficient as a business."

"Produce allowed us to reduce the amount of paper as now work orders can be created by shop floor employees."

"Improved workflows and efficient way of working."

Sustainable growth and competitive advantage

5 key benefits

Role-based

- Increased work performance with out-of-the-box apps for specific business roles for a fast and fluid way of working.

Quick set-up

- Start within one day through low implementation and training effort.

Easy to use

- Less complexity and fast learning curve through easy-to-use functions and self-explanatory user interface.
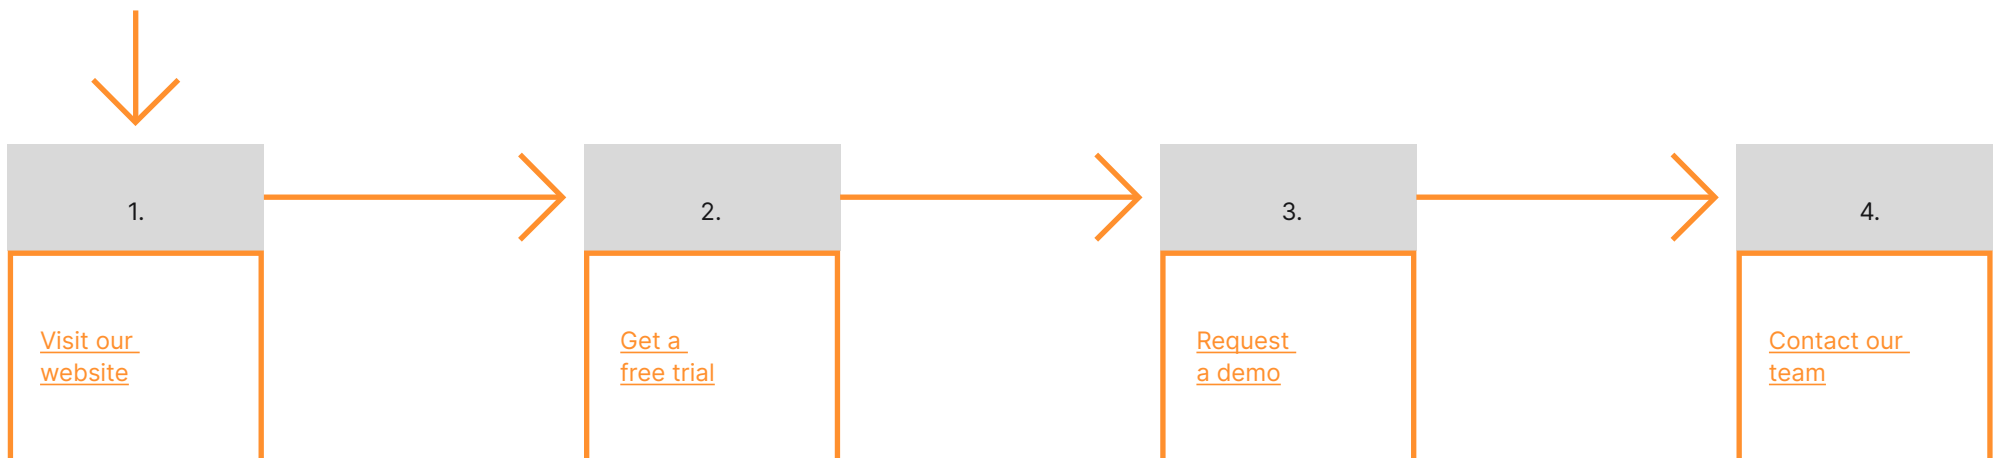

Increased automation

- Automate and improve collaboration between your teams with a real-time and paperless communication.

Cost-saving

- No resources required for administration and maintenance of the solution.
