CRM for Outlook

**FEATURED PARTNER**

BitPeople A/S

Chem-Tec Plating A/S is highly specialized in functional plating primarily including properties such as contractability, solderability, wear, and abrasion resistance, frictional properties, hardness, and corrosion resistance. With Boyum's products, life has become much easier for the employees, and now with improved transparency within the business.

### Customer Challenges

- The previous outdated ERP system resulted in a lot of manual work.
- Poor, ineffective communication made it difficult for employees in the company to work closely, collaboratively, and successfully as a team.
- The lack of data, structure, and automation affected production, administration, and sales.

### Solution

- The Boyum solutions enabled freeing up time for employees, achieving process optimizations, and increased productivity.
- There was a need for a system that allowed them to make better data-based decisions and see data in real-time, both related to the communication with the customers, but also very valuable for the communication internally in the company.

### Results

- Automated workflows and improved transparency in the business.
- Able to make better decisions based on reliable real-time data of the business.
- The Boyum add-ons supported high growth without increasing the number of employees as well.

**"WE COULD NOT HAVE ACHIEVED A SIMILAR BUSINESS GROWTH WITH THE SAME NUMBER OF EMPLOYEES WITHOUT THESE ADD-ONS"**

Bo Hvid Mikkelsen / CEO
